EDUCATION

NMIMS MPSTME, MUMBAI **2024 - 2028**
B.Tech Data Science **CGPA:8.63**

TECHNICAL SKILLS

Languages: Python, SQL
AI/ML: Langchain, Langgraph, RAG, PCA, LDA, KNN, K-means Clustering, Linear & Logistic Regression, Regularization
DL: Neural Networks, ANN, Activation Functions, Forward & Backward Propagation
Backend Systems: FastAPI, RESTAPI, WebSockets
Databases & Search: PostgreSQL, SQLite, FAISS, BM25
Tools: Git, Github, Docker, Power BI, Tableau

PROJECTS

ProjectScope AI | RAG, ChromaDB, BM25 **[GITHUB] | [LIVE DEMO]**

- Developed as student-first RAG platform to discover existing projects, assess technical overlap, identify potential research gaps, and recommend differentiated novelty, feasible project scopes.
- Integrated OpenAlex, Crossref, and GitHub APIs to retrieve academic publications, research metadata, and public software repositories with traceable source links.
- Implemented hybrid retrieval combining semantic embeddings, ChromaDB vector search, BM25 lexical retrieval.
- Built an evidence-grounded evaluation workflow covering prior-work discovery, technical similarity analysis, novelty recommendations, student-specific feasibility assessment, and implementation planning.

Customer Shopping Behaviour Analysis | PostgreSQL **[GITHUB]**

- Designed and executed an end-to-end data analysis pipeline for customer shopping behaviour using SQL, Python, and Power BI.
- Performed EDA, and statistical modeling in Jupyter Notebooks, evaluating demographic segments, purchase frequencies, and payment preferences to uncover high-value customer trends.
- Developed an interactive Power BI dashboard incorporating advanced visualizations to track key performance indicators including order values, promotional/discount impacts, and preferred shipping categories.

Nashville Housing Data Cleaning | PostgreSQL **[GITHUB]**

- Cleaned raw housing data using PostgreSQL.
- Standardized inconsistent records, removed duplicates, handled missing values, and transformed data into analysis-ready format.
- Applied SQL functions including CASE statements, string manipulation, CTEs, and update operations to improve data quality.

CERTIFICATIONS

RAG Systems & Agentic Workflows with Pinecone and LangGraph - Board Infinity

ACHIEVEMENTS

Head — Google Developers Group MPSTME
Joint Secretary — IEEE CS MPSTME
SIH 25 - Under top 30 & 2nd Place in Problem Statement in Internal Hackathon
