EDUCATION

NMIMS MPSTME, MUMBAI **2024 - 2028**
B. Tech Data Science **CGPA: 8.63**

TECHNICAL SKILLS

Languages: Python, SQL, C, C++

AI/ML: Langchain, Langgraph, RAG, PCA, LoRA/QLoRA, Tensorflow, PyTorch

DL: Neual Networks, CNN/RNN, Activation Functions

Backend Systems: FastAPI, RESTAPI, WebSockets

Databases & Search: PostgreSQL, SQLite, FAISS, BM25

Tools: Git, Github, Docker, Power BI, Tableau, Apache Airflow, Apache kafka

PROJECTS

TMT Demand Prediction | MLflow, Apache Airflow, FastAPI, PostgreSQL **[GITHUB]**

- Architected an End-to-End MLOps Pipeline: Engineered a reproducible time-series demand forecasting system using DVC and MLflow, structuring data contracts, strict schema validation gates, and tracking 10+ model experiments with versioned artifacts and lineage.
- Automated Model Governance & CI/CD Promotion: Implemented metric-gated deployment pipelines with MLflow Model Registry, leveraging alias-based staging/production routing, automated rollbacks, and shadow scoring endpoints to guarantee zero-downtime model updates.
- Production-Grade Serving & Auditability: Built and containerized a low-latency FastAPI service with Docker supporting real-time and batch CSV inference, integrating PostgreSQL for full prediction audit logging, request tracing, and payload lineage.
- Closed-Loop Monitoring & Automated Retraining: Integrated Evidently AI and Prometheus for data/concept drift detection and latency monitoring, triggering automated retraining DAGs via Apache Airflow upon statistically significant distribution shifts.

Global COVID Data Exploration | PostgreSQL **[GITHUB]**

- Analyzed global COVID-19 trends using PostgreSQL.
- Utilized joins, aggregations, window functions, and CTEs to calculate infection rates, mortality rates, vaccination progress, and country-wise comparisons.
- Built analytical SQL queries to extract meaningful business insights from large datasets.

Nashville Housing Data Cleaning | PostgresSQL **[GITHUB]**

- Cleaned raw housing data using PostgreSQL.
- Standardized inconsistent records, removed duplicates, handled missing values, and transformed data into analysis-ready format.
- Applied SQL functions including CASE statements, string manipulation, CTEs, and update operations to improve data quality.

CERTIFICATIONS

RAG Systems & Agentic Workflows with Pinecone and LangGraph - Board Infinity

ACHIEVEMENTS

Head — Google Developers Group MPSTME
Joint Secretary — IEEE CS MPSTME
SIH 25 - Under top 30 & 2nd Place in Problem Statement in Internal Hackathon
